No Key Required.

MiniLock – No Key Required.

Handle sets with lockable handle rose

MiniLock is a subtle non-keyed locking solution for many attractive series from the HOPPE product range. It is suitable for interior doors without a drilled keyhole where it should still be possible to lock the door.

In contrast to many other solutions, in MiniLock the locking mechanism has been integrated into the rose instead of the handle, thus significantly increasing the selection of available handle designs.

Operation is simple: the mechanism is locked by a discreet, easily accessible sliding button on the rose. A quick movement of the sliding button, e. g. with your thumb, is sufficient to lock or release the handle.

Quick and easy installation

Installing MiniLock is simple and does not require any special door preparation. Easy-to-use plug-in connections allow for quick assembly. It takes only a single screw to securely fasten the handle set to the door. Thanks to the tried-and-tested Quick-Fit connection, the handles sit stable and free from play.

Available for many series with attractive finishes

MiniLock is available for many attractive HOPPE series, including classics such as Amsterdam and Hamburg, as well as for the Macau series with its elegant wedge shape.
